

Quadrant, alternating

Dense network
reference predictor

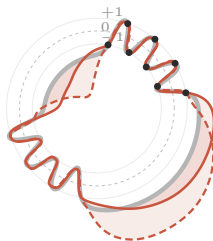

reference

Frozen NTK
initial kernel, all blocks

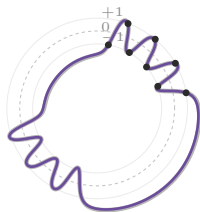

RMS 171
output scale $\times 100$

Trained factors
 $W_0 + AB$, rank 24

RMS 0.6766 / 1.541
two seeds: solid / dashed

Response memory
 $q = 3$, rank bound 24

RMS 0.04561

— dense reference

• training labels

Same initialized network; each model at training MSE $\simeq 0.001$, at its own fitting time.
RMS differences from dense use 8192 circle queries. Signed ticks give output values; any wider NTK scale is marked explicitly.
