

1 Responses

forward history h_i

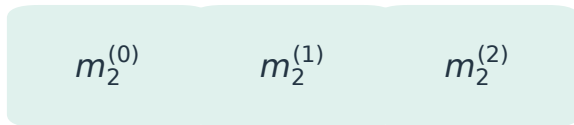

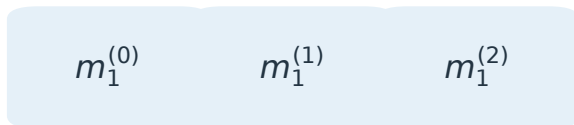

backward history $b_i = r\delta_j/\rho$

2 History coordinates

same three polynomial modes

One entry per neuron, per mode.
The moment vectors evolve.

3 Interaction

fixed, retained

$$\Delta \hat{W} = -\frac{2}{n\tau} \sum_{k < 3} (2k + 1) m_2^{(k)} (m_1^{(k)})^\top$$

Current interaction changes the responses entering the next memory update

Fixed basis in history coordinate

Moving directions
in neuron space
